SKILLS

Core
JavaScript (ES6+), TypeScript, React.js, Next.js, Redux, Node.js, Express, HTML5/CSS3, Java, Python

UI and data
Material UI, Ant Design, AG Grid, Formik, Strapi (headless CMS), REST APIs, responsive web design

Security and performance
Session management, SSO, cross-tab sync, token expiry handling, server-side rendering (Next.js), lazy loading, memoization, re-render optimization

Testing and tools
Playwright (E2E), unit testing, code reviews, Git, Webpack, Jenkins, JIRA, Agile

AI and backend
Ollama (local LLMs), prompt design, LLM-assisted code review, AI-assisted development, webhook automation, OAuth 2.0, HMAC-SHA256

Familiar with
GraphQL, React Router (SSR), search and analytics integrations, A/B experimentation

PROFESSIONAL SUMMARY

Frontend Developer with 5+ years of experience building secure, high-performance web apps with React.js, Next.js, and TypeScript. Currently building IPO, Funds, and eDIS flows plus session security for **Breeze**, a stock broking platform, and built **Nova AI**, a locally hosted LLM code review bot for Bitbucket.

EXPERIENCE 5+ YEARS

Synapsewave Technology Pvt. Ltd. | Software Engineer

Jan 2025 – Present | Mumbai (Remote)

Continued on Breeze after it moved from 63 Moons Technologies to Synapsewave.

- Built the **IPO** and **Funds** modules for Breeze, a stock broking platform for businesses, plus the **eDIS** authorization flow for selling holdings.
- Designed an inactivity **auto-lock** and **session timeout**, with cross-tab sync via `localStorage` so locking one tab locks every open tab.
- Built a custom **toast notification** system in React, optimized to avoid unnecessary re-renders.
- Integrated **AG Grid** and **SSO** authentication, and wrote **Playwright** E2E tests for critical flows.
- Fixed live production tickets quickly in a time-sensitive trading environment.

Project: Nova AI, a Bitbucket code review bot | Node.js, Express, Ollama (qwen2.5-coder), Bitbucket API, OAuth 2.0

- Reviews pull requests with a locally hosted LLM and regex static checks, posting line-level inline comments and a risk-scored (0-100) summary; detects hardcoded credentials, SQL injection, and `eval()` and suggests auto-fixes.
- Secured webhooks with HMAC-SHA256 verification and OAuth 2.0 and processes them asynchronously; source code stays private with no cloud API costs.
- Completes a full review in under a minute on a local 7B model, for example on a 1500+ line change.

63 Moons Technologies | Software Engineer

Oct 2024 – Jan 2025 | Bangalore (Remote)

- Built and maintained frontend features for Breeze, a stock broking platform for businesses, until the product transferred to Synapsewave.

RahalTech | Frontend Developer

Dec 2023 – May 2024 | Remote

- Led frontend development for the launch of RahalTech's first website: responsive, SEO-friendly UIs in React.js and Next.js.
- Integrated RESTful APIs with backend developers. **Tech:** React.js, Next.js, Node.js, HTML5, CSS3

Reevoy | Software Engineer

Nov 2021 – Nov 2023 | Mumbai, India

- Core frontend team member who built the product from scratch, including a risk management tool for invoice factoring and user profiles with comments.
- Improved performance with component optimization and lazy loading; ran code reviews; built the company's static website with Strapi (headless CMS).
- **Tech:** React, Redux, Next.js, Material UI, Ant Design, Formik, REST APIs, Python, LangChain

Cognizant | Programmer Analyst Trainee

May 2021 – Nov 2021 | Pune, India

- Built Java solutions (JDBC, JSP) and turned UI/UX mockups into interactive interfaces; worked with senior developers across the full development lifecycle.
